

Specialist Rehabilitation Medicine Course

**Thursday 1st March 2012
& Friday 2nd March 2012**
Royal Derby Hospital

This two-day national course* is suitable for consultants, specialty registrars and other professionals involved in rehabilitation.

Day 1:

Thursday 1st March

Achieving better outcomes in rehabilitation meetings: advanced skills for practitioners

The emphasis of the day is in developing practical skills and understanding the theory behind these. This will include skills in running or participating in multidisciplinary meetings and in managing conflict in rehabilitation settings.

Day 2:

Friday 2nd March

Neuroplasticity and rehabilitation

The day will concentrate on recent scientific developments regarding plasticity, but will also have an emphasis on how these might be translated into rehabilitation practice. The seminars will include specific examples of research in the neuroscience of plasticity that have occurred over the last four years and an overview of mechanisms of plasticity. The afternoon will include a practical session on the process of taking an intervention from the laboratory into clinical practice

The course is part of a four-year cycle of programmes also covering:

2010: Specialist rehabilitation medicine services; General medical skills for rehabilitation

2011: Assessment and management of sexual issues in rehabilitation; Exercise physiology and exercise for disabled people

2013: Culture, ethnicity and the life cycle in rehabilitation; Unexplained pain and disability

*** Also available as individual days. See application form for fees and early bird offers.**
